

ADVANCED COATINGS . GREENER SOLUTIONS

KANSAI PAINT

KANSAI PLC SDN. BHD. (345458-D)

ABOUT KANSAI PAINT JAPAN

Founded in 1918, Kansai Paint Co., Ltd. is Japan's largest and most advanced paint company. It is one of the world's top 10 coating companies with turnover of USD 2.6 billion in 2010.

In 2009, Kansai spent USD 50 Million on R&D and its center in Hiratsuka, Japan, engaging 589 chemists and scientists to run its R&D activities.

With over 90 years of experience in the paint business, Kansai has garnered more than 40 worldwide networks from Asia to the Americas and employs almost 8,000 employees worldwide.

Today, Kansai Paint enjoys a well-established position as one of the world's leading paint manufacturers. The various coatings provided by Kansai Group play important roles in protecting and enhancing all types of structures and goods around the world.

ABOUT KANSAI PLC SDN. BHD.

Kansai PLC Sdn Bhd (formerly known as PLC Laboratory Sdn Bhd) has been a manufacturer of advanced coating materials and specialized construction and maintenance products since 1995. Our expertise covers wide range of products in diverse applications that meets the latest expectations such as green materials and environmental sustainability. The products cover the following applications :

- Anti-corrosion Coatings
- Resin Flooring
- ESD Coatings & Flooring
- Advanced Waterproofing Systems
- Glass Flake Reinforced Coatings & Linings
- Underwater and Wet Surface Coatings
- Heat Reflective Coatings

Over the years, we have firmly established ourselves as a reliable source for a comprehensive range of superior products. Our renowned products and services have benefitted diversity of users from petrochemical, automotive, semiconductor, offshore & onshore oil & gas, water and waste water treatment plants, food, pharmaceutical, power generation & distribution, bridges, jetties and other above ground and underground structures.

Since 1995, we have built a solid reputation for dependability, prompt and efficient service in accordance with ISO 9001 : 2008 Quality Management system. Supported by our experienced staff and products of exceptional performance and quality, we will continue to focus on our extensive R&D towards advanced technology, environmental friendly and user friendly products.

ABOUT ALESCO

Our "ALESCO" brand name is formed from the latin words "ALES", meaning "wing" and "ESCO", which stands for "Excellent Specialty Company". In ancient Latin, "alesco" itself means to grow and mature. Therefore, "Alesco" expresses the concept of Kansai Paint growing continuously as a leading specialty company.

The "ALESCO" corporate brand expensses to the world the image of the superb quality and excellent value of Kansai Paint and its group of companies.

ANTI-CORROSION COATINGS

We produce zinc rich primers, high build epoxies, aliphatic polyurethanes, surface tolerant epoxies and other traditional onshore and offshore protective coatings for structural steel as well as the advanced formulations of cold galvanizing, rust stabilizer, water-based polyurethane and plural component epoxies.

UNDERWATER & WET SURFACE EPOXY COATINGS

SURESEAL 1208 UWE is a specially designed VOC free coating to provide protection to steel and concrete structures in wet condition and underwater application. It is ideal for maintenance works on onshore and offshore structure especially for areas below water line, the splash and tidal zone and pipes with condensation. Application of SURESEAL 1208 UWE on steel structures can be carried out in adverse weather conditions such as wet surface, high relative humidity and low surface temperature without any negative impact.

RESIN FLOORING

1) Car Park Flooring

A high build epoxy decking designed with anti-skid properties designed for vehicular traffic. The flooring system is suitable for commercial car park, garage, driveway and wet areas where anti-skid property is required.

2) Clean Room & Hygienic Flooring

Epoxy coating system design for clean room and hygienic location. A seamless flooring design for semiconductor, food processing, electronic and other relevant application.

3) ESD Flooring

Conductive and anti-static coatings is another advanced coating system designed to provide the solution to problems related to static charges for the electronics and IT sectors as well as hazardous location to prevent sparks during discharge. The system helps to discharge static charges that might lead to destruction of the products and equipment or causing the server to crash.

4) Heavy Duty Epoxy Flooring

Heavy Duty Epoxy Flooring System is a seamless epoxy flooring based on solvent free advanced epoxy resins - hardener system to provide durable and hardwearing surface. The system is designed to handle aggressive and abusive working environment. It has outstanding compressive strength, abrasion resistance, impact resistance and chemical resistance. Recommended use at Warehouses, Heavy Industry Manufacturing, Workshops, Assembly Plants, Aircraft Hanger and Loading Bay.

ANTI-CORROSION COATINGS (ROOF COATINGS)

A 3-in one roof coating system that provide anti-corrosion properties, excellent gloss and colour retention under the sun and high solar reflection index to keep the interior cool.

WATERPROOFING

Most advance waterproofing systems to arrest water leakage problem, suitable for all concrete and metal protection against leakages. A building or structure needs waterproofing as concrete itself will not be watertight on its own. The conventional system of waterproofing involves 'membranes'. This relies on the application of one or more layers of membrane that act as a barrier between the water and the building structure, preventing the passage of water.

TOWER COATINGS

TOWERSHIELD is the range of protective coatings we developed for communication towers. The specially formulated coatings provide cost effective solution to communication tower owners which comply with the requirement by the Department of Civil Aviation. The product is sold to more than 30 countries in the world and accepted by most multinational Telco's.

POLYUREA

Spray Polyurea is a unique coating with outstanding mechanical properties. A tough film with 450% elongation suitable for the most extreme wear and tear applications. The product is recommended for tank lining, waterproofing, flooring, pond lining and protective coating.

SPORT FLOORING

A multilayers non-skid, non-reflective and UV-resistant coating suitable for indoor and outdoor sports facilities.

CHEMICAL RESISTANT LINING

Glass Flake Reinforced Vinyl Ester and Epoxy Novolac are recommended for lining of highly corrosive area expose to strong acids and alkali. It is suitable for protection of steel and concrete surface.

ANTI-CARBONATION & CONCRETE PROTECTION COATINGS

The coating system is designed to coat over reinforced concrete surface to prevent the diffusion of carbon dioxide and water into the concrete matrix that will change the acidity of the concrete environment and result in corrosion of the reinforcing steel bars. Suitable for coastal reinforced concrete structure like jetty, bridge and etc. Concrete Protection Coating is a specially designed coatings and impregnation for the hardening and strengthening of concrete surface subjected to aggressive environment.

ANTI-BACTERIAL COATINGS

Kansai PLC Sdn Bhd is producing a wide range of anti-bacterial coatings and flooring. Anti-bacterial coatings will provide permanent bacterial static surface on walls and floors especially suitable for hospitals, clinics and nursery to avoid cross infection. It is also used in food and pharmaceutical manufacturing facilities to provide hygienic manufacturing environment.

HIGH TEMPERATURE COATINGS

We produce pure silicone and modified silicone coatings for applications over surfaces subjected to temperatures up to 600°C.

STANDARD REPAIR & GROUTS

SUREFIX are epoxy & PU Grouts designed for either new construction project or structure repair works. SURE-ADD admixture is designed to improve the workability and physical properties of concrete.
