## TABLE OF CONTENTS

Acknowledgement .....	ii
Table of Contents .....	iii
List of Tables .....	vii
List of Figures .....	ix
Section 1 Introduction .....	1
Section 2 Slope Stability Analysis .....	2
2.1 The Limit Equilibrium Analysis .....	2
2.1.1 Methods of Slices .....	2
2.1.2 The Friction-circle Procedure ...	3
2.1.3 Log-spiral Procedure .....	4
2.1.4 Analysis for Infinite Slopes ....	4
2.2 The Limit Analysis.....	4
2.3 Shapes of Critical Shear Surfaces .....	5
2.4 The Factor of Safety .....	5
Section 3 Methodology for Classification and Evaluation of Slope Stability Charts.....	6
3.1 Notations .....	6
3.2 Classification of the Charts .....	13
3.3 Evaluation of the Charts .....	13
Section 4 Stability Charts for Simple Slopes with Uniform Soils .....	15
4.1 Characteristics of the Charts .....	15
4.1.1 Bell (1966) .....	15
4.1.2 Bishop and Morgenstern (1960)....	15
4.1.3 Castillo and Revilla (1977) .....	16
4.1.4 Chen, Giger and Fang (1969) .....	16
4.1.5 Cousins (1978) .....	17
4.1.6 Ellis (1973) .....	19
4.1.7 Hoek and Bray (1981) .....	22
4.1.8 Huang (1975) .....	22
4.1.9 Janbu (1954) .....	22

TABLE OF CONTENTS (continued)

4.1.10	Janbu (1967) .....	24
4.1.11	Kenney (1963) .....	24
4.1.12	Law and Lumb (1978) .....	25
4.1.13	O'Connors and Mitchell (1977) .....	25
4.1.14	Spencer (1967) .....	25
4.1.15	Spencer (1968) .....	25
4.1.16	Taylor (1937) .....	26
4.1.17	Wright (1982) .....	26
4.1.18	Summary .....	27
4.2	Comparison of Numerical Results .....	27
4.3	Evaluation of the Charts .....	33
Section 5	Stability Charts for Simple Slopes with Simple Variations in Shear Strength .....	35
5.1	Classification .....	35
5.2	Shear Strength Varying Linearly with Depth, but Isotropic .....	35
5.2.1	Gibson and Morgenstern (1962) .....	37
5.2.2	Hunter and Schuster (1968) .....	37
5.2.3	Kenney (1963) .....	38
5.3	Anisotropic Soils .....	38
5.3.1	Chen, Snitbhan and Fang (1975) .....	39
5.3.2	Livneh (1967) .....	40
5.3.3	Lo (1965) .....	40
5.3.4	Matthai and Ranganatham (1968) .....	41
5.3.5	Ranganatham and Matthai (1967) .....	41
5.4	Anisotropic Shear Strength Increasing Linearly with Depth .....	41
5.4.1	Chen, Snitbhan and Fang (1975) .....	41
5.4.2	Lo (1965) .....	42
5.4.3	Reddy and Mogalih (1976) .....	42
5.5	Layered Soils .....	42
5.5.1	Chen (1975) .....	43
5.5.2	Fang, Snitbhan and Chen (1975) .....	43
5.6	Evaluation of the Charts .....	43
5.6.1	Charts for Isotropic Shear Strength Increasing Linearly with Depth .....	46
5.6.2	Charts for Constant, Anisotropic Shear Strength .....	46

## TABLE OF CONTENTS (continued)

5.6.3	Charts for Anisotropic Shear Strengths Increasing Linearly with Depth .....	50
5.6.4	Charts for Layered Soils .....	50
Section 6	Stability Charts for Simple Slopes with External Loads or Internal Body Forces .....	52
6.1	Slopes Subjected to Surcharge .....	52
6.1.1	Janbu (1954) .....	52
6.1.2	Reddy and Mogalih (1976) .....	54
6.2	Slopes Subjected to Submergence .....	54
6.2.1	Janbu (1954) .....	54
6.2.2	Murphy (1972) .....	56
6.3	Slopes Subjected to Drawdown .....	56
6.3.1	Desai (1977) .....	56
6.3.2	Morgenstern (1963) .....	57
6.4	Slopes Subjected to Seismic Forces	
6.4.1	Majumdar (1971) .....	57
6.4.2	Prakash, Saran and Purushothammaraj (1969) .....	59
6.4.3	Prater (1979) .....	59
6.5	Evaluation of the Charts .....	61
6.5.1	Slopes Subjected to Surcharge ..	61
6.5.2	Slopes Subjected to Submergence ..	61
6.5.3	Slopes Subjected to Drawdown ...	63
6.5.4	Slopes Subjected to Seismic Force .....	65
Section 7	Stability Charts for Two-Dimensional Slopes with "Complex" Geometry .....	67
7.1	Characteristics of the Charts .....	67
7.1.1	Bell (1966) .....	67
7.1.2	Brauns (1980) .....	69

The stability of natural and man-made slopes represents an important area of geotechnical engineering practice as history continues to show that landslides in natural slopes and instability in embankments and dams have claimed many human lives and damaged valuable property. The analysis of slope stability is a complex endeavor demanding the understanding and application of geotechnical principles and the art of discretion and engineering judgement. Iterative computations are often the rule to determine the most probable failure conditions. Engineers have attempted to make this task easier by idealizing various slope conditions and developing simple stability charts.

The objectives of the study described in this report are two-fold. First, a literature survey was conducted to locate, examine and classify the various slope stability charts which were available. Second, these charts were evaluated from the perspective of their usefulness in practice.
