

True 4D BIM: Location Based Management Systems

- 3D needs 2D therefore 5D needs 4D
- BIM for the GC/CM
- Use 5D and 4D integrated data to manage the workface
- Four cases proving that 4D is needed at the workface

BIM to Ponder

Is estimating and scheduling without BIM 1D?

- Can you have 3D without 2D?
- In construction can silo'd workflows make the team successful?
- Does BIM exist for the GC/CM without 2D, 3D, 4D and 4D?
- And...

What is 5D without 4D?

- Non-integrated process
- Will not allow you to get 5D into the field
- 4D is the missing link between what matters to you construction manager and what matter to your project executive
- 4D is more then a simulation it includes controlling your 5D
- 3 Cases:
 - QVMC how not using integrated 5D hurts the project team
 - KPOMC SMOB how using integrated 5D helps the project team
 - Camino Medical Centre integrated 5D project optimization

Acute Care Facility in Napa, California 72,000 SF added to existing Medical Center Includes six Smart Operating Rooms, 20 private intensive care rooms, clinical and pathology laboratories

QVMC HERMAN FAMILY PAVILION

Case Study: ASAP Cost and Time Management

The Client:

- Wanted to understand Cost associated per their process
- 5D-4D LBMS used for Reporting only
- Schedule and cost was managed using ASAP approach

What we observed in recorded actuals data:

- (De)mobilizations
- Waiting Time
- "Blow-fly" effect
- "Flat-lining"
- Cascading delays

Actual Behaviors: Electrical Trade

Observed Patterns:

- Early Starts in most locations
- Slower than planned production
- Multiple locations active at the same time
- Working out of sequence
- Smaller than planned crew size

Actual Costs of Behavior: Electrical Trade

NB: Generic Cost data (Source: RS Means 2010) has been applied to preserve the indemnification of the General Contractor on this case project

What was the result of implementing integrated 5D? How did we focus our effort to achieve success?

IN SUMMARY

Observations

- Proactive problem solving
- More efficient reporting structure
- Emphasis on tracking and monitoring 5D production
- Detailed documentation of production deviations and remedies
- Negative project impacts cost, quality and time
 associated to not doing integrated 5D to field

The Proof is...

- What do we need to understand to get 5D to the workface?
 - Dissemination of the information that matters to those that are using it
 - Consider cost/benefit of demobilization of resources relative to risk management
- What trends am I observing?
 - Analogue process in construction; digital disruption through BIM
 - Connecting the hearts and the minds of traditional delivery with

the Pudding.

- What questions do I have around 5D?
 - Understanding the emotional and political motivations to use 5D/4D/3D/2D over 1D
 - How do you create the silo experience that results in the integrated approach?
- What are the next steps for the industry?
 - Innovation will result in impacting the already low profit margins
 - Consider the bigger organizational impr(m)ovement
 - Be afraid of the nimble early adopter
