Marine and Protective Coatings

Marine and Protective Coatings are specially formulated to provide protection against corrosion. They are used on metal surfaces such as storage tanks for edible products, fuel, oil, water, etc; pipes; piles; vessels and metal bridges. They can also be used for concrete surfaces such as floors, laboratories, via-ducts water and sewerage treatment plants.

The color chips on this chart are representations rather than exact matches to the colour of the specific product selected. The exact appearance of any colour of any product will depend on the gloss level of the product and the composition of the individual coating. Difference in gloss from coating to coating may result in visual differences for the same named colour.

Application Assistance

PAYNT (M) SDN BHD Field Service Representative and Application Technicians are available to train your own work force or outside contractor in the proper use of equipment and in applying the materials.

Technical Service

Through your PAYNT (M) SDN BHD Representative our laboratory facilities are available to analyze service conditions in your particulars environment and to provide the right coating.

PAYNTOXY®
