FOREWORD

As practices in road construction change over time, it is imperative for Jabatan Kerja Raya (JKR) to continuously update and improve their standard specifications. These new specifications are not only aimed at keeping abreast with current technologies but also to help in improving the quality of constructed product. In unison, these new specifications have a significant positive impact on the construction industry especially with the incorporation of new products and technologies.

Standard Specification for Road Works is an essential component in the road infrastructure construction industry. This specification provides an improved guidance in the material selection and the production of good quality workmanship and products, based on current best practices. The purpose of this standard specification is to establish uniformity in road works to be used by road designers, road authorities, manufacturers and suppliers of road related products.

This document “Section 7: Road Lighting” is a part of a series of improved specifications in the Standard Specification for Road Works. This document was fully adopted from the three (3) specifications published by the Electrical Engineering Branch (*Cawangan Kejuruteraan Elektrik*) of JKR Malaysia namely, Specification L-S1: Low Voltage Internal Electrical Installation, Specification L-S3: Low Voltage Underground Cable and Specification L-S20: Road Lighting Installation.

The title of this document had been changed from *Street* Lighting to *Road* Lighting in order to maintain the consistency of the wording used in the Specification.

This document will be reviewed and updated from time to time to cater the changes on polices and current requirements. In this respect, any comments and feedback regarding to this specification should be forwarded to: -
