

BIM for Civil Engineering Contracts

*Ir. Ronan Collins MHKIE, MHKIBIM, CEng
Representing CICES*

People = Leadership & Collaboration

Process = Project Execution Planning

Power = BIM software & hardware

WHO will manage the BIM process?

Is the purpose of BIM defined ?

HOW will BIM be implemented ?

WHEN will BIM start ?

BIM Project Manager

- Plan, develop and manage the BIM Standard.
- Provide quality control and checking procedures.
- Train project staff
- Provide guidance to the project team on how to review the models in order to resolve clashes etc,
- Organize workshops to explain findings to the designers and to assist them in understanding design issues.
- Provide technical support to the project staff

Supported event: HKIUD Co

HKIUD confere
URBAN DESI
Date: 31st March 2012
Venue: Langham Place Hotel
555 Shanghai Street

HKIBIM supported the HKIUD conference
• 31st Mar 2012 to 1st Apr 2012 - HKIUD Co
• Event flyer and registration form
• Day 1 conference (31-Mar) with coffee
• Day 2 conference (1-Apr) with coffee
• The conference is free of charge

HKIBIM BIM Standard - BIM

Introduction
Building information modelling (BIM) is the
during its life cycle. Typically, it uses the
software to increase productivity in building
Building Information Model (BIM) to coordinate
spatial relationships, geographic information
components.
HKIBIM BIM Standards

Hong Kong Institute of
Building Information Modelling
BIM Project Specification

HKIBIM Specification (Rev 2.1)

Table of Contents

1.0	Project Definition
1.1	Project Background
1.2	BIM Consultancy Scope of Services
2.0	BIM Team Resources, Roles & Responsibilities
2.1	Organisation Chart
3.0	Programme Management
3.1	A1 & A2 Milestone Activities
3.2	A3 Milestone Activities
3.3	A4 Milestone Activities
3.4	A5 Milestone Activities
4.0	BIM Delivery Framework
4.1	BIM Modelling Process
4.2	BIM Model Zones
4.3	WKT BIM Standards
4.4	Level of Detail & Category Codes
5.0	Coordination Management Plan
5.1	Clash Analysis Process
5.2	Clash Analysis & Coordination Process
6.0	Revision Management Plan

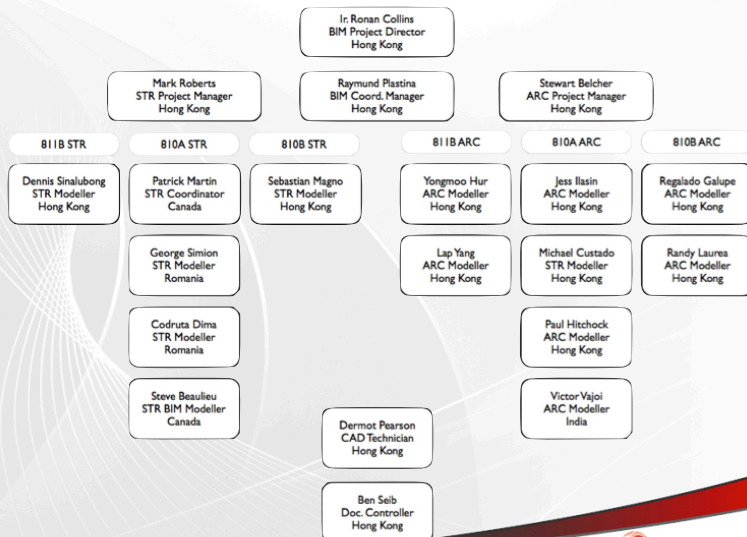

Appendices

Appendix A – Creating RFT – Online system
Appendix B – Folder Structure
Appendix C – Element Status
Appendix D – Family Naming

BIM - Level of Detail

- Design BIM vs Construction BIM
- Importance of BIM Specification
- Quantity Takeoff Accuracy
- Clash Analysis Process - Depends on LoD
- Coordination & Documentation
- Production of Fabrication Drawings
- Site Installation Management

BIM Team Organisation

Planning

MTR West Kowloon Terminus

9

Typical Cross Section

- 4 levels below ground level
- Integrated Highways Structures

10

Feature Roof & South Facade

11

Entrance Building

12

Entrance Building Roof Geometry

- 3 Primary Steel Trusses 175m long

Steel & Concrete interface

- Mega Columns from 3 different levels
- Roof supported by concrete Arch

Complex Interfaces

- 3 Civils Contracts
- 4 Building Services
ECS,
Control,
Elec,
FPS & P&D
- 4 Systemwide
Packages

Client Implementation of BIM by MTR

- de-risk the design and construction of WKT
- provide a collaboration and communication tool for MTR staff, designers, contractors and project partners
- identify & resolve missing, erroneous, inadequate design information

Scope of WKT BIM ... Everything !!

- 15,000 drawings
- All disciplines

17

Entrances

18

Subways
Under-passes
Foot bridges

Highways Structures

19

Building Spaces

- Delivery Routes
- Head Rooms
- Staircase Alignments
- Escalators

20

Structural Model

Cutting Sections Through Revit Model

21

Architectural Model

810A - ARCHITECTURAL + STRUCTURAL REVIEW

22

Building Services

23

2D to 3D - BIM Review Process

- Reviewed 15,000 drawings
- Completed detailed clash analyses
- Identified over 2,500 RFI's with nearly 8,000 issues raised

24

Highways vs Vent Building Structures

Civils Drainage vs Foundation Tie beams

Ramp Headroom vs Structure

Cat Ladder vs Cladding Envelope

Structural Coordination

BIM Coordination Review

29

Typical Clash Analysis Report

Area 810B
Level B4 Grids 41-58

30

Technical Queries Process

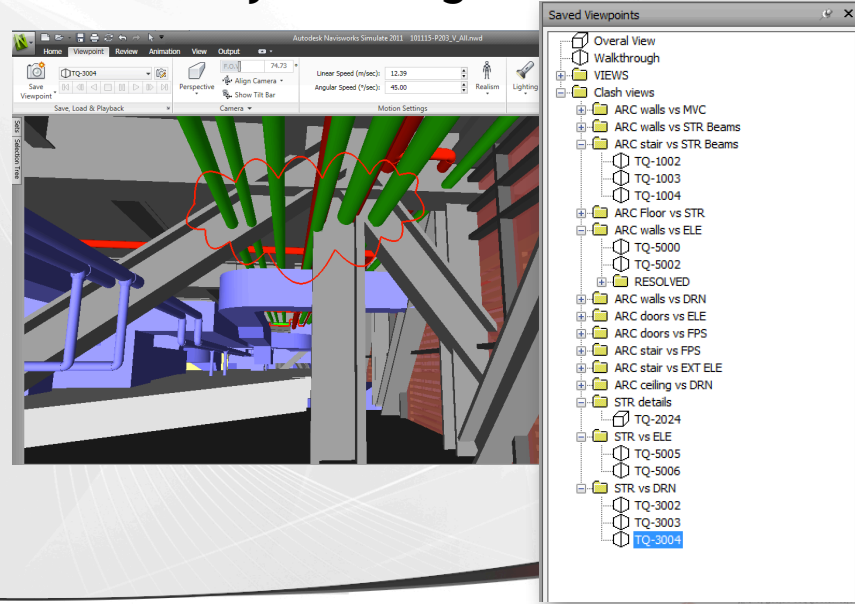

31

Engineering Co-Ordination Report

32

Make it Easy for Designers to Review...

33

Collaboration Design Workshops

34

Contractor Use of BIM

- co-ordination of specialist sub-contractors.
- construction sequence planning, programme validation
- Co-ordinated Services Drawings management
- Quantity Take Off
- Laser Scanning

35

Steel Detailing - Alfasi

36

Glazing & Cladding - Gartner

Steel & Cladding Interface

Construction Planning

Construction Planning

Excavation & Concrete Pour Sequence

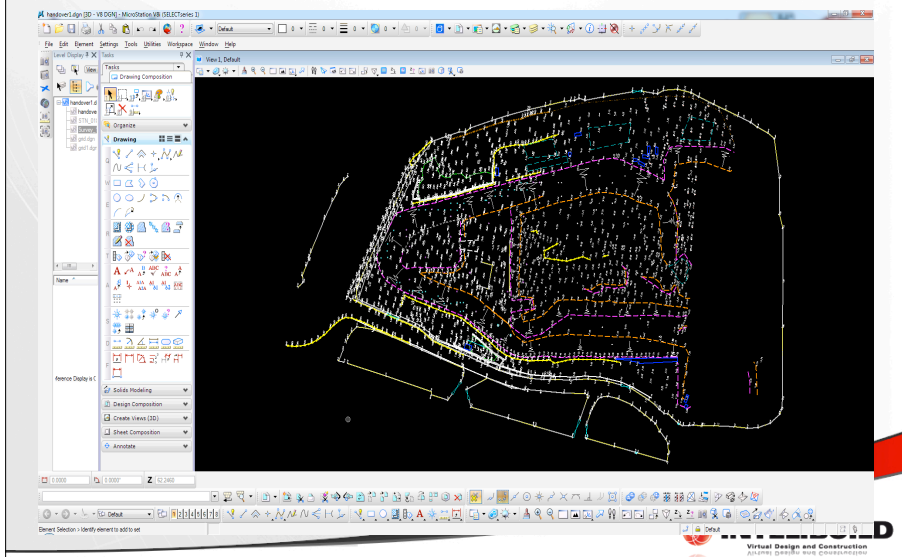

41

Use of BIM for Site Surveys

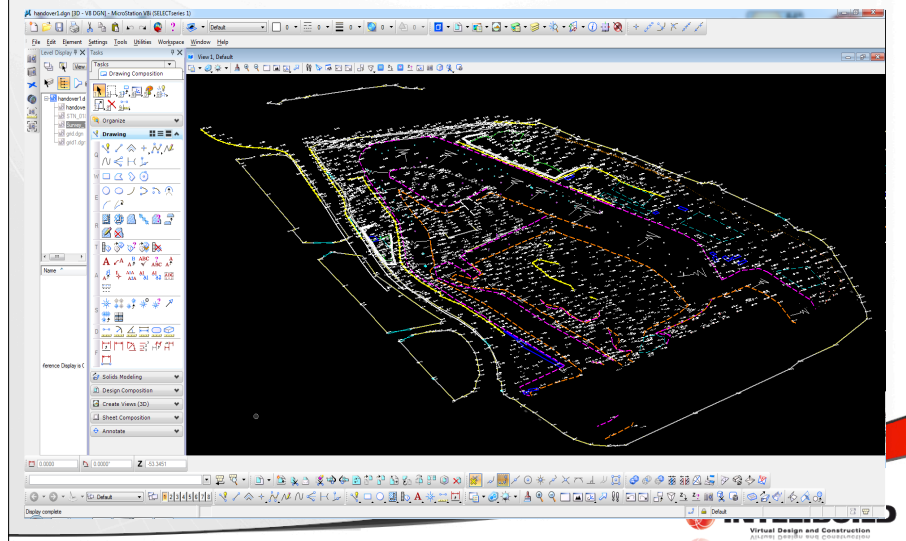

42

Site Survey information ...

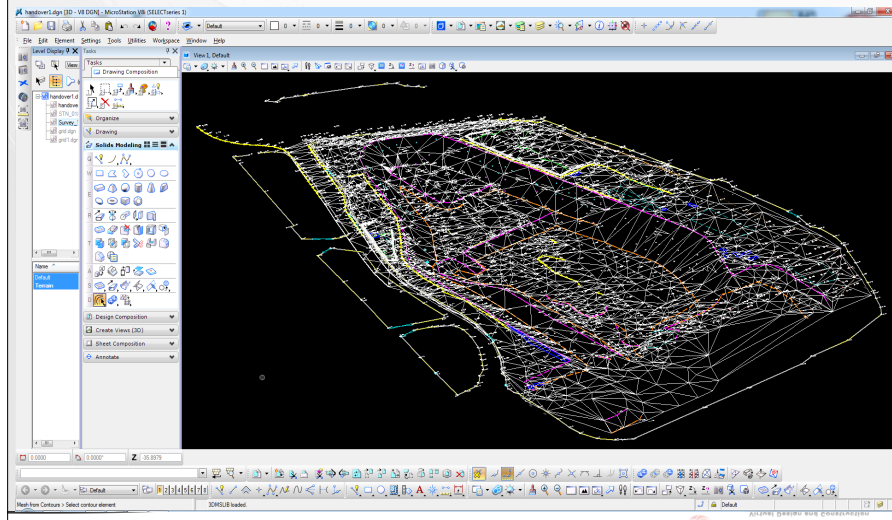

43

... 3D Points file.

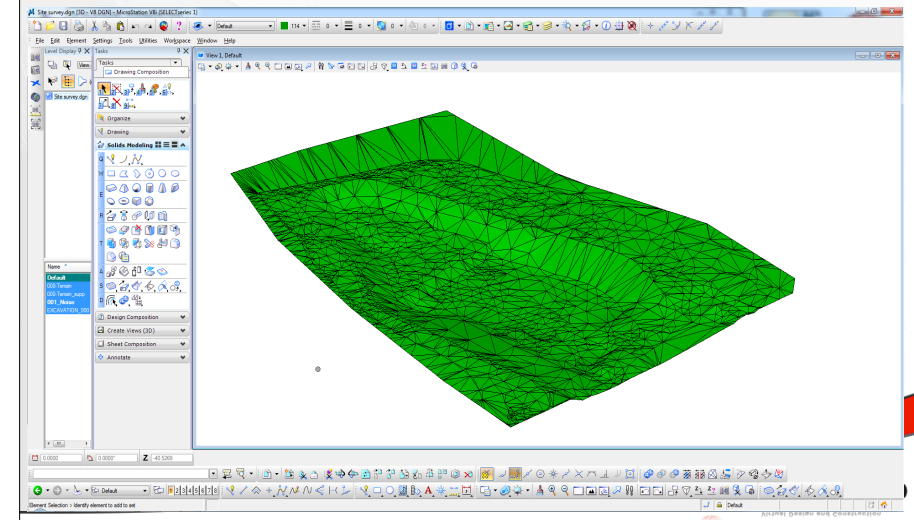

44

Surface Mesh Created from Survey.

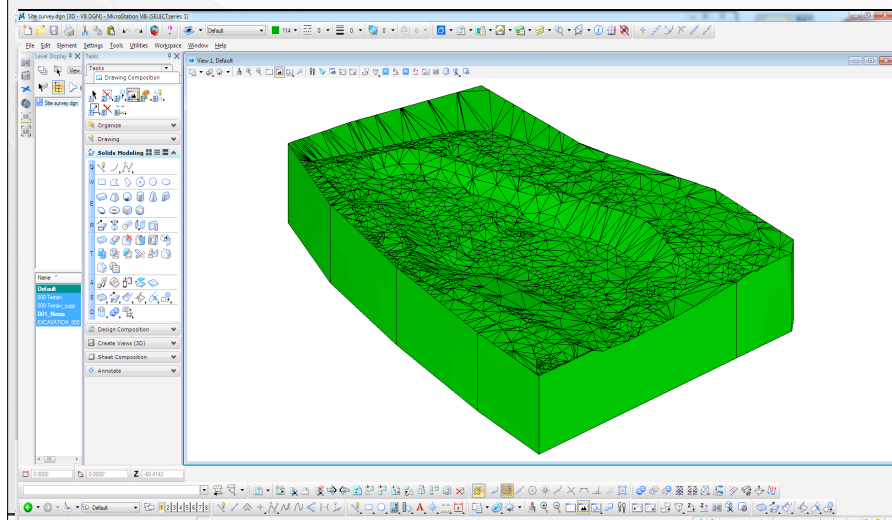

45

Rendered Mesh of Survey

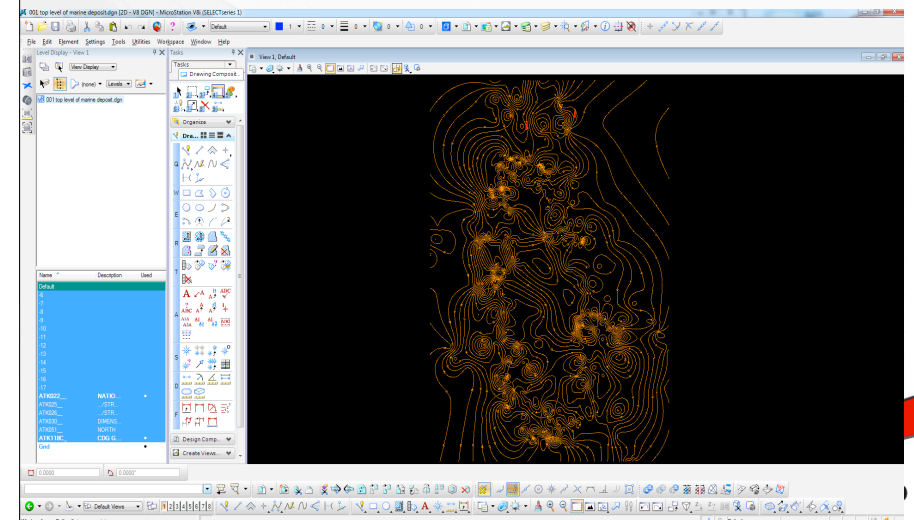

46

Survey mesh converted to 3D solid

47

Marine deposit survey (2D)

48

Repeat for all strata.

The figure displays four screenshots of a geological modeling software interface, arranged in a 2x2 grid. Each screenshot shows a 3D block model of a geological stratum and a list of geological units on the left side of the interface.

- Top Left:** Labeled "MARINE DEPOSITS". The 3D model is a blue rectangular block. The list of units includes "Marine Deposits" and "Alluvium".
- Top Right:** Labeled "ALLUVIUM". The 3D model is a green rectangular block. The list of units includes "Alluvium" and "Marine Deposits".
- Bottom Left:** Labeled "DECOMPOSED GRANITE". The 3D model is a brown rectangular block. The list of units includes "Decomposed Granite" and "Alluvium".
- Bottom Right:** Labeled "ROCKHEAD". The 3D model is a dark brown rectangular block. The list of units includes "Rockhead" and "Decomposed Granite".

Strata Volumes.

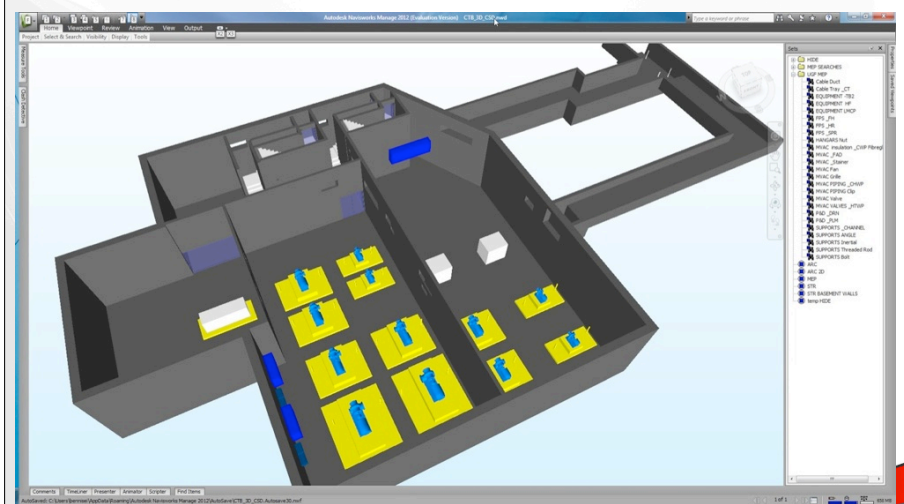

Rockhead = 73,994m³

CSD & SEM Coordination

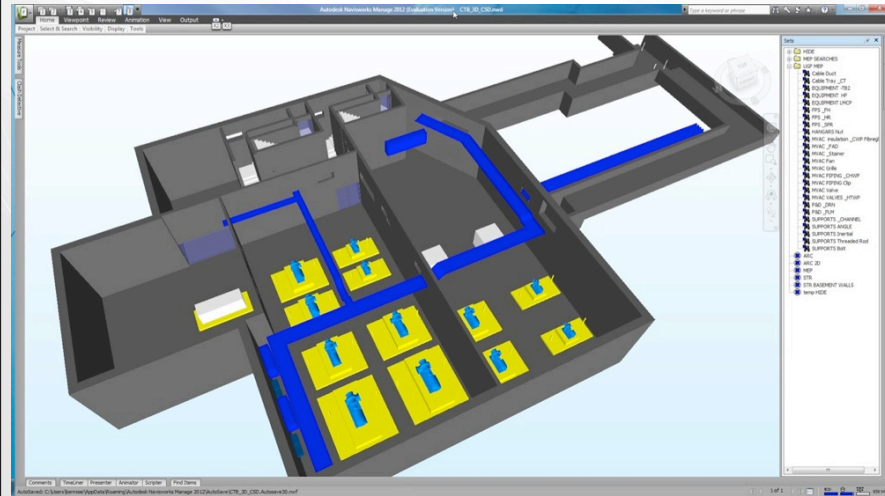

Chilled Water Plantroom

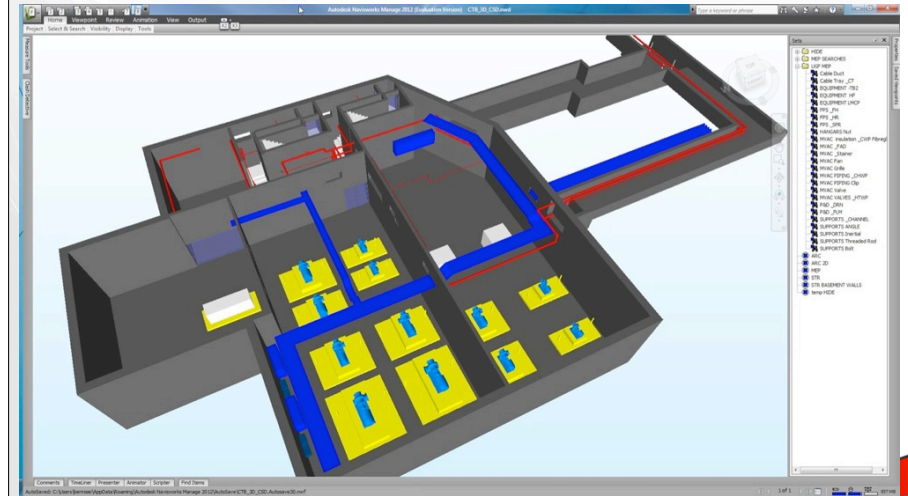

52

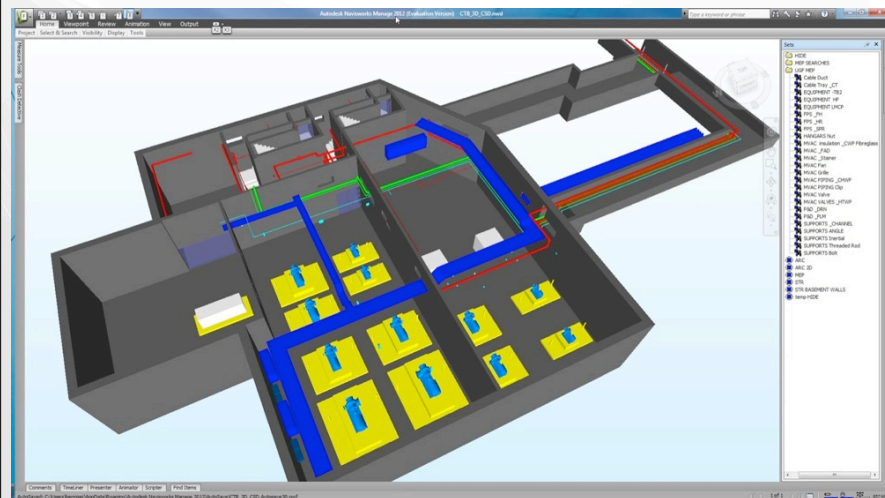

Electrical - Cable Trays

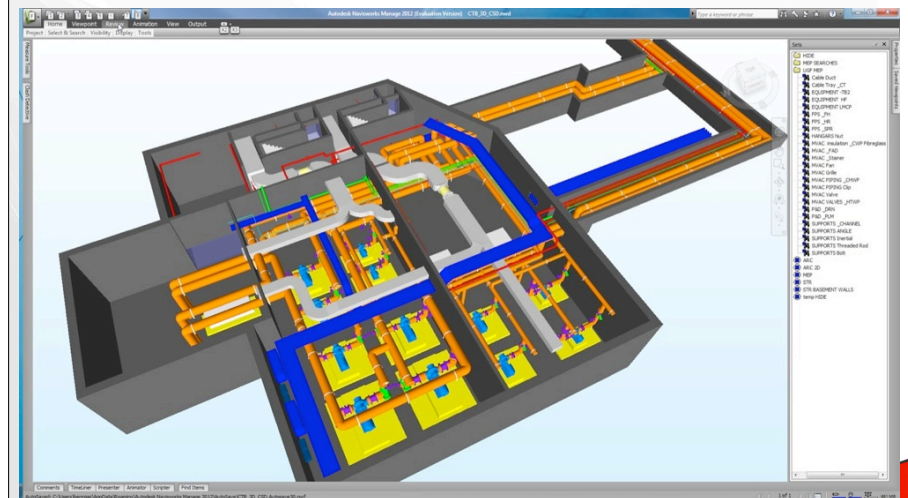

Fire Suppression

Plumbing & Drainage

Chilled Water Pipework

Clash Analysis - CSD Level

57

Cable Tray vs Ductwork

58

KEY IDEA - Add More Detail

59

Laser Scanning

60

Epic Scan Example

61

The BIM Co-ordination process must be;

Planned

Managed

Checked

62
