## **GUIDE SIGNS DESIGN AND APPLICATION**

**Ketua Pengarah Kerja Raya  
Jabatan Kerja Raya Malaysia

## FOREWORD

The purpose of this manual is to establish uniformity in design and application of all traffic signs and control devices in Malaysia for the benefit of road users, road and traffic authorities, and manufacturers of traffic signs.

As practices in road infrastructure change over time, it is imperative for Jabatan Kerja Raya (JKR) to continuously update and improve their standard guidelines. The previous drafts on **Arahan Teknik (Jalan) 2E/87 : “Guide Signs Design and Application”** published by JKR in 1986 is superseded by this new **Arahan Teknik (Jalan) 2E/87 (Pindaan 2011)**, hereinafter called **ATJ 2E/87 (Pindaan 2011) : “Guide Signs Design and Application”**. This new document covers among others general requirements, principles, classification and latest design layout for guide signs.

It must be noted that the sign’s designs and application standards indicated in this Arahan Teknik and those in series 2/85 are to be followed at all times.

The compilation of this document was carried out through many discussions held by the technical committee members with various experts in their respective fields. Feedbacks and comments received were carefully considered and incorporated into the document wherever appropriate.

This ATJ will be reviewed and updated from time to time to cater for the changes on policies and current requirements. In this respect any comments and feedback regarding this ATJ should be forwarded to:-
